

# Weather Information Network (WINN)

Honeywell

# Program Goals

> Program Goals

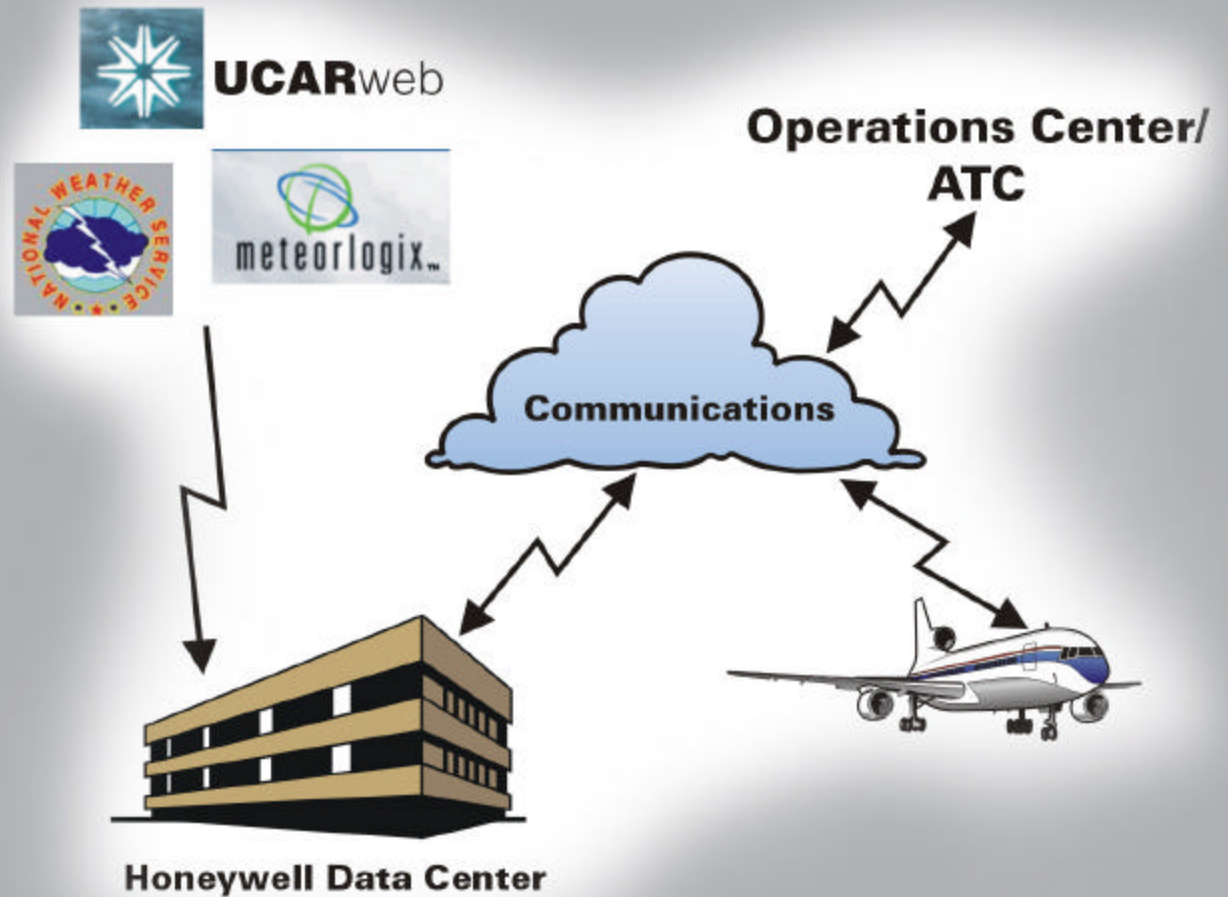

- Put graphical *strategic* weather in airline cockpits
- Deploy a usable system by 2002

**Think *inside* the box**

# System Overview

> System Overview

# Challenges

## > Challenges

- Weather Products - which ones?
- Human Factors/Display
- Data Delivery
- Payback - does safety sell?

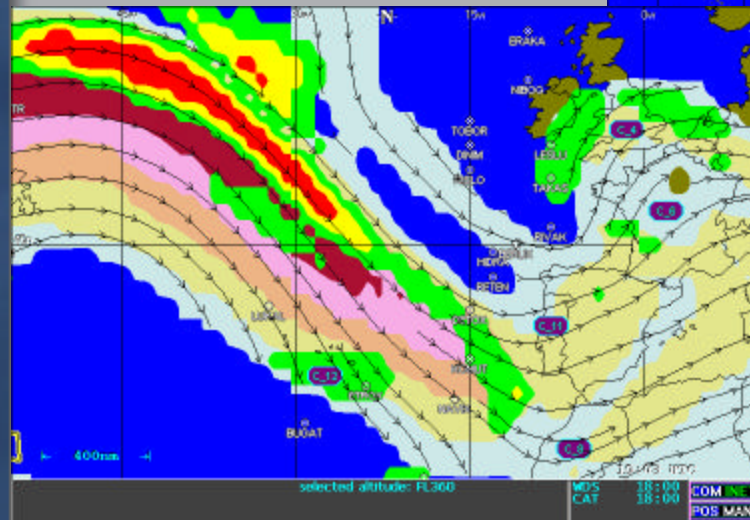

> Weather Products

**Honeywell**

← Radar (US)

Convection  $\Rightarrow$

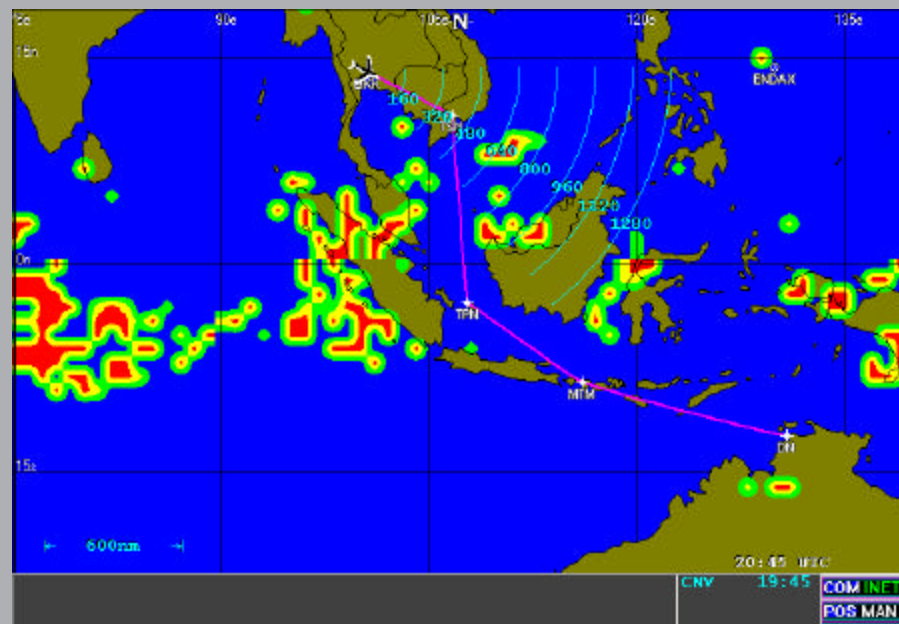

## ⇐ Clear Air Turbulence

# Human Factors

> Human Factors

- Individual product selection
- Text support data
- Colors
- Route
- Profile view
- History loops

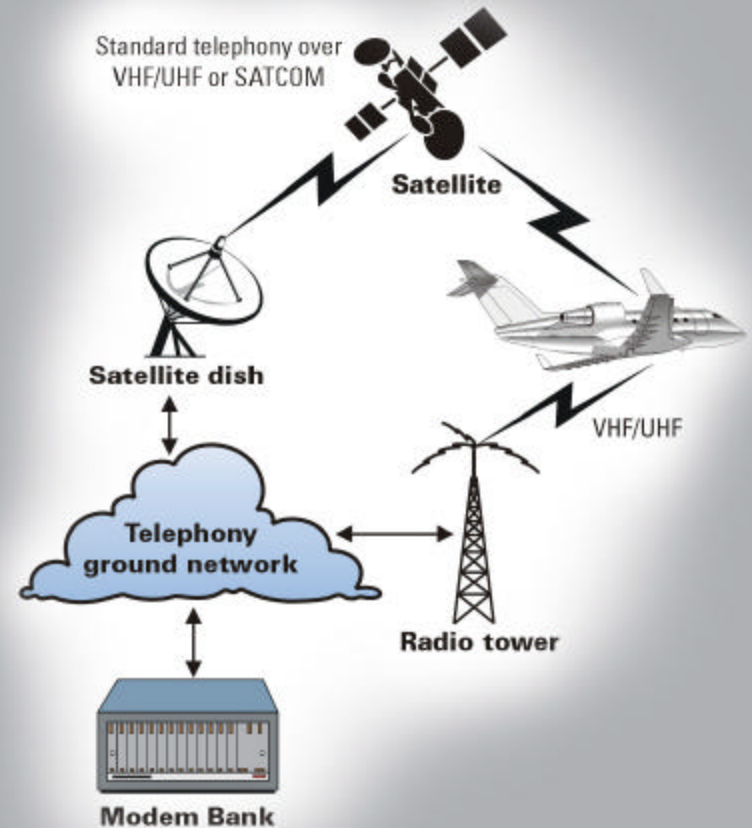

**High Glance Value**

# Data Delivery

> Data Delivery

- Existing 2002
  - UHF Telephony
  - Inmarsat SATCOM
- Future
  - Iridium
  - Inmarsat Swift 64
  - Satellite broadcast
  - Others?

# What's Ahead

> What's Ahead

- “Harden” the prototype
  - mature the ground architecture
  - reduce cost, latency
  - ensure reliability
- Adapt to EFB installations
- Communication paths
  - identify new paths
  - get the speed up, cost down

**New displays and communications  
driven by many forces**
